EDUCATION

Northeastern University **Sept. 2023 – Present**
Master of Science, Computer Science Expected graduation: June 2025
Coursework: Algorithms, Foundations of AI, Game AI, Large Language Models
GPA: 4.0/4.0

Ramaiah Institute of Technology **July 2023**
Bachelor of Engineering, Computer Science & Engineering
Coursework: Data Structures, Database Systems, Object Oriented Programming, Cloud Computing, Deep Learning
GPA: 8.98/10.0

TECHNICAL KNOWLEDGE

Languages:	Python, C#, TypeScript, JavaScript, Java
Technologies:	Git, REST APIs, GraphQL, Redis, PGVector, SQL, Pytest, Node.js, Docker, Kubernetes, AWS
Skills:	Generative AI, Data Structures & Algorithms, Version Control, CI/CD, Agile, DevOps
Open Source:	google/metrax, google/adk-python

WORK EXPERIENCE

Dell Technologies **July 2024 – Dec 2024**
AI Software Engineer Co-op *Hopkinton, MA*

- Boosted developer productivity by 10% by building a **GenAI Chatbot** with **RAG pipelines** leveraging Confluence data from **PGVector** instances, providing developers with quick access to project-related information using a FastAPI server, **LLM APIs**, **PostgreSQL**, **Open WebUI**, **Docker** and **Python**.
- Implemented CI/CD automation for **LLM API testing** using Python, GitLab CI, and Kubernetes, reducing deployment time and improving software quality.
- Developed an AI-driven VSCode Assistant using React, Node.js, OAuth, and TypeScript.

Sabre Corporation **Jan 2023 – July 2023**
Software Development Engineer Intern *Bengaluru, India*

- Implemented bug fixes and security enhancements in **C#**, **.NET Framework**, and **OracleDB** on Radixx Res Microservices, powering an Airline Reservation System used by 50+ airlines.
- Spearheaded a Full Stack Web App using **TypeScript**, **Node.js** and **React** for a Sales Data Dashboard, improving accessibility to sales records and streamlining 30% of sales dispute resolutions.

PROJECTS

Recall SDK: ***Pluggable Memory Layer for LLMs*** **Jan 2025 – Feb 2025**

- Published a **Python** SDK on PyPI with **500+ downloads**, enabling OpenAI API compatible LLM applications to store, retrieve, and reuse conversational memory across user sessions and platforms.
- Engineered a conversational memory backend that extracts relevant facts from user prompts, stores them in a **SQLite** DB, searches stored context via embeddings, and injects the relevant memories into subsequent LLM prompts.
- Implemented comprehensive unit tests with **Pytest** and streamlined deployment through automated **Docker** packaging.

Good First Issue: ***Readme generator for GitHub Repos*** **May 2025**

- Developed a full-stack web app that aggregates and recommends beginner-friendly issues from open-source projects, with features like organization/language-based filtering, smart issue recommendations, and periodic data refreshes.
- Engineered the backend using **FastAPI** and **Redis**, and developed the frontend with **Next.js** and **TailwindCSS**, integrating GitHub Actions for Auto-deployment to **Azure Container App.**

GRIME: ***Graphical Image Manipulation and Enhancement Application*** **Oct 2023 – Dec 2023**

- Developed and **tested** a desktop Image Processing Application using **Java**, **JUnit** and Swing with a text-based UI that accepts commands and an interactive Graphical User Interface to load, edit and save images.
- Focused on scalable and modular design and adherence to the **MVC architecture** and **SOLID principles**.
